

## Text Book

### Advances in Water Quality & Management

**Editor(s):** Sudhakar M. Rao, Monto Mani and N. H. Ravindranath

Centre for Sustainable Technologies, Indian Institute of Science, Bangalore, India

#### About the Book

This invaluable book contains research recommendations of experts from various organizations and provides an in-depth treatment of topical subjects on both water quality and quantity, namely: source and control of geogenic and anthropogenic contamination in groundwater and surface water resources, desalination technologies, climate and water balance, watershed and groundwater management and rainwater harvesting, to name a few.

This book includes the research recommendations of experts from various organizations, which includes KTH Sweden. Summary recommendations are based on the recommendations of expert papers and deliberations.

#### Contents

##### ● SECTION I: Ground and Surface Water Quality

Water Quality — Pollution, Testing and Treatment Techniques

Assessment of Sustainable and Quality Water in Streams

Groundwater Quality Issues in India

##### ● SECTION II: Sanitation and Wastewater Treatment

Water and Sanitation in Human Settlements

Low Cost Options for Disposal of Human Excreta

Wastewater Treatment Technologies

Desalination Techniques

##### ● SECTION III: Water Management

Sustainable Water Management — S&T Issues and R&D Challenges

Watershed Planning & Management Issues

Water Conservation in Agriculture

Groundwater Resource Estimation, Recharge Techniques and Research Initiatives in India

Groundwater Recharge Process and Groundwater Flow Models in Granitic Terrain & Alluvium: Emerging R&D Problems

Roof Water Harvesting Systems

Rooftop Rainwater Harvesting

Use of Climate Variables for Streamflow Prediction

Watershed Management for Security against Climate Change

Women-Centric Issues in Water Resources Management in Rural India

##### ● SECTION IV: Summary: Issues, R&D Challenges, Institutional and Societal Gaps in Sustainable & Quality Water

**ISBN : 978-981-05-9012-3**  
**(hardbound)**

**Pages : 342 pp**

**Year : 2008**

**Price : US\$58 / €45**

Full length contents available at:

**Readership:** Researchers, Academics and Practicing engineers. This book will serve as a curriculum material for Undergraduates and Postgraduates in environmental science and engineering. Besides, appealing to the general reader interested in sustainable and quality water, the book would also serve as a source document to agencies supporting research in this field.
